

London Housing Case Study Conclusion

Applying some data analysis concepts on the London Housing Case study, revealed some interesting results. The results show that Hackney Borough had the highest percentage increase in housing prices over the last 20 years (1998 - 2018) at 620% and Hounslow Borough the lowest at 398%. Thus, the most expensive houses in London were located in Hackney Borough. Also, cleaning the data took some quiet a bit of time and I had to reply on stock overflow and other Google search.

The diagram below depicts the results graphically:

Average Price increase for Boroughs of Greater London from 1998 to 2018
